RODUCT: Storage container with floor drainage

Warehouse containers with floor drainage are intended for storing materials and substances for which it is necessary to maximally limit negative consequences of possible spillage.

Containers of this type are used to store bins, barrels with paints, oils, fuel etc. In the case of spillage of the stored materials container floor is not contaminated as the spilled liquid makes it to a spillage container through a galvanized rate where it is possible to collect it and remove it quickly. Spillage containers are tightly welded thus allowing for avoiding contamination of the area under the container

20 FEET USED CONTAINER

20feet container	Inner dimension	Outer dimension
Length	5758mm	6058mm
Width	2352mm	2438mm
Height	2385mm	2591mm

20 FEET CONTAINER MODIFICATIONS

1- One side fully open
With two folding Doors

2- Vent Lovers on doors

2- Floor made with
25x3 30/100mm Grating

4- Drain system for spill
